

**Spotted some poo?**

Break it apart with a stick to get a closer look.

**Rabbit and Hare**

Keep your eyes peeled for little round balls of poo, which are yellowy-brown or green and full of grassy fibres.

**Deer**

Look for smooth, shiny, dark pellets that are a bit pointy at one end. Deer regurgitate and chew their food twice before full digestion (rumination).

**Otter**

Otter poo is called spraint, and it usually contains fish bones, feathers, seeds and berries. Find it on rocks and the riverbank.

**Fox**

Fox poo is a bit like dog poo, but it can be a bit pointy at one end and full of fur, feathers, tiny bones, seeds and berries.

**Hedgehog**

Hedgehog poo is dark brown-grey or black, and can be up to 5cm long. If you look carefully, you might spot beetles and the ends of worms!

**Badger**

Badgers poo in shallow pits called 'latrines'. The poo is usually firm and sausage-shaped, but if it's sloppy, they've been eating lots of worms - yuk!
